Take-home messages

- ▶ *Brucella* spp is an uncommon class 3 pathogen isolated in laboratories serving non-endemic areas.
- ▶ Laboratory staff are unfamiliar with the phenotypic characteristics of *Brucella* spp, and need periodic education about uncommon hazardous organisms.
- ▶ All Gram-negative or Gram-variable bacilli or coccobacilli should be processed in a class 2 biosafety cabinet pending definitive identification.
- ▶ Exposed staff members should be assessed by the occupational health department, offered antibiotic prophylaxis and monitored with serology.

Acknowledgements: The authors would like to thank colleagues at the Veterinary Laboratory Agency and the Brucella Reference Laboratory for their assistance with the four cases.

Competing interests: None.
