December 2014 Volume 67 Issue 12

1072 Prognostic value of bone marrow involvement by clonal immunoglobulin gene rearrangements in follicular lymphoma. E Berger, T Helgeland, K Liseth, T Lakeland, A Molven, O K Vintermyr

1078 Use of single-nucleotide polymorphisms (SNPs) to distinguish gene expression subtypes of chronic fatigue syndrome/myalgic encephalomyelitis (CFS/ME). N Shimosako, J R Kerr

1084 Rapid real-time PCR for detection of Mycobacterium tuberculosis complex DNA in formalin-fixed paraffin embedded tissues: 16% of histological ‘sarcoïd’ may contain such DNA. G Surat, W A Wallace, I F Laurensen, A-L Seagar

1088 A real-time prospective evaluation of clinical pharmaco-economic impact of diagnostic label of ‘penicillin allergy’ in a UK teaching hospital. M Li, M T Krishna, S Razaq, D Pillay

1104 Do the eyes have it? Performance of molecular detection of tuberculosis on fresh and paraffin embedded tissues, including those with no visible tissue. G L McKew, S M Dubedat, R C Chan

1106 Grading of breast cancer on needle core biopsy: does a reduction in mitotic count threshold improve agreement with grade on excised specimens? C A Dhatwal, C Graham, J Loane

This online version of this article contains multiple choice questions hosted on BMJ Learning.

Cover legend: A rectal adenocarcinoma with strong FGFR2 membrane and cytoplasmic immunostaining intensity. Inset: Clustering analysis of genes associated with the FGFR signalling pathway activity with FGFR2 significantly upregulated in responders to neoadjuvant concurrent chemoradiotherapy. See page 1057.
