

Cover legend: Myxoid liposarcoma, classic subtype. Tumours often arise in the deep soft tissue of the extremities of adolescents and adults and form a lobulated mass that can be identified preoperatively as myxoid after fat suppression with a high T2 fluid signal such as in this knee coronal MRI image with T2FS (A). Macroscopically, MLS demonstrates a glistening, gelatinous cut surface (B). Microscopically, fat lobules with an abundant myxoid stroma rich in delicate, arborising capillaries are distinctive (C) H&E, original magnification  $\times 100$ . The tumour cells show admixed ovoid to stellate and adipoblast-like morphology (D) H&E,  $\times 120$ . DDIT3 rearrangements can be detected by FISH (E), and the chimeric DDIT3 protein can be detected with immunohistochemistry (F) DDIT3 immunohistochemistry,  $\times 200$ . MLS, myxoid liposarcoma; FISH, fluorescence in situ hybridization. Center. DDIT3 protein architecture allows it to dimerise with other bZIP proteins including itself, arresting DNA transcription and inducing apoptosis and impaired differentiation in the case of adipogenesis.

## Contents

April 2024 Volume 77 Issue 4

### Gene of the month

- 211 Gene of the month: DDIT3  
*J A Díaz-Perez, D A Kerr*

### Editorial

- 217 Gender distribution in pathology journal editorial boards: a call to action  
*S Dry, L C Collins*

### Original research

- 219 Gender distribution in surgical pathology journal publications and editorial boards  
*M A Nguyen, S Yousef, R Gupta, C McKenzie*

### Review

- 225 Risk assessment in pT1 colorectal cancer  
*E J Norton, A C Bateman*

### Original research

- 233 Expression and correlation of PD-L1 and HER2 in oesophageal squamous cell carcinoma  
*L Rong, H Zhao, Y Li, M Jin, J Lu*

- 239 Comparison of assessment of programmed death-ligand 1 (PD-L1) status in triple-negative breast cancer biopsies and surgical specimens  
*A Noske, K Steiger, S Ballke, M Kiechle, D Oettler, W Roth, W Weichert*

### Short reports

- 246 Impact of cellular morphology and three-tiered nuclear grade on progression of conventional renal cell carcinoma  
*L Domonkos, M Yusenko, G Kovacs, L Peterfi*
- 251 Kinase expression in angiomatoid fibrous histiocytoma: panTRK is commonly expressed in the absence of *NTRK* rearrangement  
*A C Vargas, C Joy, F M Maclean, F Bonar, D D Wong, A J Gill, A L Cheah*

### PostScript

- 255 Tumour-to-tumour metastasis of breast cancer (donor) and clear cell renal cell carcinoma (recipient): a case report  
*J Hau, J Briosa Neves, M Varia*
- 257 Non-deletional haemoglobin H (Hb H) disease morphologically masquerading as congenital dyserythropoietic anaemia type II: a diagnostic pitfall  
*M Jamwal, S Sreedharanunni, R Taak, N Singh, S Chhabra, J Kaur, S Amatya, P Sharma, A Trehan, R Das*

### Original research

- 259 Efficacy of postmortem CT and tissue sampling in establishing the cause of death in clinical practice: a prospective observational study  
*M G Mentink, B G H Latten, F C H Bakers, C Muhl, F Benali, P J Nelemans, R J M W Rennenberg, R P Koopmans, D C J J Bergmans, B Kubat, P A M Hofman*

- 266 Successful demand management in diagnostic immunology testing  
*K Lilly, N Proudlove, C Bethune*

- 278 Implementation of an ISO15189 accredited next-generation sequencing service with the fully automated Ion Torrent Genexus: the experience of a clinical diagnostic laboratory  
*R Werner, A Connolly, M Bennett, C K Hand, L Burke*

- 284 Modes of assay interference and the effectiveness of serum pretreatment approaches in detection of anti-HLA antibodies  
*J Abrahams, P Rao, G P Morris*
