

**phosphastrate alkaline**  
**complete reagent system**  
**for automated colorimetric**  
**assay of serum alkaline**  
**phosphatase**

For full details of the Phosphastrate Alkaline complete reagent system and how its ease, speed and economy can make alkaline phosphatase level determination a simple routine test, write or 'phone:

General Diagnostic Department,  
William R. Warner & Co. Ltd., Eastleigh, Hants. Eastleigh 3131

**linear** in activity and time  
**sensitive** in all ranges – normal and abnormal  
**simple** no need to correct for bilirubin or haemoglobin  
**rapid** only 20 minutes incubation

**The safe,  
simple,  
all-purpose  
antiseptic**

**Harmless to tissue; only one major dilution;  
broad bactericidal activity**

Savlon Hospital Concentrate contains 'Hibitane' Chlorhexidine Gluconate (1.5%) and 'Cetavlon' Cetrимide B.P. (15.0%). It is ideal for virtually every antiseptic purpose—cleaning and treating wounds, pre-operative 'scrub-up', disinfecting instruments, cleansing rubber and plastic appliances, etc.

One major dilution (1/200) for general antiseptics, and a 1/30 dilution when extra detergency is required: this standardisation, together with the advantages of proven broad-range bactericidal efficacy,

unique low toxicity and persistent action, makes Savlon the natural first choice antiseptic.

Information and a dilution guide will gladly be provided on request.
