

vital, it may sometimes be reasonable to relax the rule and take more than three samples.

In 1968, not included in the figures shown previously, 10% more patients had blood cultures than in 1965, the year with the previous highest total. The number of patients with bacteraemia was not significantly different (11%) from the previous years.

I thank Dr Rosemary Baillod, Dr Isobel Beswick, Dr Jean Bradley, Miss Phyllis George, Dr Margaret Griffith, Dr W. J. D. Fleming, Professor K. R. Hill, Dr E. A. Jones, Sister M. Kerrigan, Dr L. Kreeel, Dr Rosemary Mulligan, Dr J. Moorhead, Dr Jeanne Reeve, Professor Sheila Sherlock, Dr P. Scheuer, and Dr Anne Stewart for their help in compiling the facts for this paper. I also thank Mr B. Farrell, FIMLT, for his supervision of most of the blood cultures.
