

Lymph Node Biopsy

A Diagnostic Atlas

With 300 Photo-Micrographs in full colour

A.H.T. Robb-Smith and C.R. Taylor

LYMPH NODE BIOPSY with its new approach based on pattern recognition, is a unique blend of the classic histological, and the more recent immunological concepts of the lymphoid system.

This lavishly illustrated manual of diagnostic lympho-histopathology will be of value to the diagnostic pathologist as well as to oncologists and immunologists. It encompasses the morphological character of Hodgkin's Disease, all types of lymphoma and lympho-proliferative disorders, as well as inflammatory and other lymph-node lesions, whose differentiation often cause difficulties in diagnosis.

The approach is patterned on a decision tree, based on the structural and cellular pattern observed in the biopsy. To facilitate orientation, each chapter is prefaced by an analytical summary with which the marginal and running headings are integrated, as are the references to the 300 coloured photomicrographs of both low and high magnification. Intended to assist the practising diagnostic pathologist, the illustrations are mostly of routine stained sections; nevertheless the value of other methods, such as immunoperoxidase or electron-micrography, is emphasized.

LOCARTE FLUORIMETER

Excitation wavelengths commencing in 240 m μ

Now incorporates the following features:

- Output socket for a.c. or d.c. supply
- Flow dilution device
- Automated inbuilt electronic amplifier converter for low level detection and automatic analysis of samples
- Stability ensured with fully regulated special Mercury Arc and Lamp Zinc and special Lamp and Lamp Housing

For literature, prices and details of the Locarte Fluorimeter, write to the Locarte Company, 10 Wendell Road, London W11 0RB. Telephone: 01-273 1111.

With the Locarte Fluorimeter you can measure the fluorescence of a wide range of substances. The instrument is fully automatic and can be used for the analysis of samples in a wide range of concentrations. The Locarte Fluorimeter is a highly sensitive and accurate instrument which can be used for the analysis of a wide range of substances.
