

CONSULTANTS IN PATHOLOGY MICROBIOLOGY & HAEMATOLOGY SAUDI ARABIA

Circa £55,000 Tax Free
together with

Free High Class Accommodation • 7 Weeks Annual Leave
Substantial School Fees Allowance • End of Contract Bonus
Free Generous Holiday Flights for Dependants

Guy's Hospital is providing consultancy services, support training and quality assurance to two major hospitals in Saudi Arabia. The hospitals provide health care services for the Saudi Arabian Armed forces and their dependants.

CONSULTANT HAEMATOLOGIST for Jeddah

Applicants must have MRCpath in Haematology or recognised equivalent, with at least 5 years experience in laboratory and clinical Haematology Management; preferably with Oncology experience.

The division of Haematology deals with routine Haematological work including coagulation studies. FACSCAN available with transfusion laboratory including blood donations. A Renal transplant programme has recently commenced.

The King Fahad Armed Forces Hospital is in Jeddah, a modern cosmopolitan city on the Red Sea, which, with excellent accommodation provides a very attractive lifestyle whilst enjoying the introduction to a different culture.

CONSULTANT MICROBIOLOGIST for Khamis Mushayt

Applicants must have MRCpath or equivalent with at least 5 years including several years experience at Consultant level.

The busy General Microbiology Department which incorporates Serology, especially screening of blood donors for HIV, Hepatitis, B&C and other parentally transmitted diseases, serves the two hospitals, primary care facilities and several outlying clinics.

The King Faisal and Armed Forces Hospitals, Khamis Mushayt offer a friendly social and professional environment, excellent sporting facilities and a Mediterranean climate. Situated in the Asir National Park, the Red Sea is just two hour's drive away.

Applications should be made, enclosing a CV, to Giovanna Tomkinson, at our recruitment agency UME, Guy's Hospital, 20 Newcomen Street, London, SE1 1YR.

HEALTH CARE IN PARTNERSHIP WITH

THE GUY'S TRADITION OF EXCELLENCE

How is no longer a problem — but there's still which and why

The microcomputer revolution has made powerful machines and highly complex programs generally available. This means that users of statistical techniques need no longer be concerned with the arithmetical and algebraic details — the software will take care of all that. What is vital, however, is to understand the ideas and the basic principles of statistical analysis. In *Medical Statistics on Microcomputers* R A Brown and J Swanson Beck show how to get the best use out of microcomputers when analysing data, particularly in the pathology laboratory. They explain the rational basis of various widely applicable statistical methods and also indicate their limitations so that you can make an informed choice. Chapters include:

- Data handling
- Analysis of data from one or two groups
- Comparison of several groups
- Analysis of categorical data
- Statistical methods for diagnostic tests.

UK £8.95; Abroad £10.50; US\$25.00

BMA members: £8.45 or £10.00

ACP members: US\$21.00

Let the BMJ guide you through statistics:

STATISTICS WITH CONFIDENCE — Confidence intervals and statistical guidelines. Martin J Gardner, Douglas G Altman.

Many medical journals, including the *British Medical Journal*, now expect scientific papers submitted to them to contain confidence intervals when appropriate. Why? what are they? and how do you calculate them? *Statistics With Confidence* tells you. A clear explanation of the reasons for using confidence intervals is followed by detailed presentation of methods of calculation, including numerous worked examples and specially compiled tables. To make things even easier, a computer programme, Confidence Interval Analysis (CIA), for calculating confidence intervals, has been specially designed by Martin Gardner and details are available from the Publishing Department, *British Medical Journal* (or the American College of Physicians).

UK £7.95; Abroad £9.50; US\$24.00 BMA members £7.45 or £9.00 ACP members US\$19.00

STATISTICS AT SQUARE ONE — T D V Swinscow

The statistical testing of data is indispensable in many types of medical investigation and a help on countless occasions in clinical practice. This book provides step by step instruction. Subjects covered include standard deviation, X^2 tests, t tests, non-parametric tests, and correlation. The book includes sections on Fisher's exact probability test and rank correlation. Methods specially adapted to pocket calculators.

UK £3.95; Abroad £5.00; US\$13.00 BMA members £3.45 or £4.50 ACP members US\$11.00

STATISTICS IN PRACTICE — Sheila M Gore, Douglas G Altman

No doctor can afford to ignore statistics: most modern medical research uses statistics. This important and authoritative book provides clear information on designing studies, applying statistical techniques, and interpreting studies that use statistics. It can be easily understood by those with no statistical training and should be read by all those who want to keep abreast of new developments.

UK £8.95; Abroad £11.00; US\$23.00 BMA members £7.95 or £10.00 ACP members US\$19.00

EPIDEMIOLOGY FOR THE UNINITIATED — Geoffrey Rose, D J P Barker

Epidemiology has its own techniques of data collection and interpretation and its necessary jargon of technical terms, and in *Epidemiology For The Uninitiated* the authors guide the novice expertly through the theory and practical pitfalls. The second edition of this popular *BMJ* handbook has been revised to include further details of epidemiological methods and some of their more dramatic applications, such as the investigations on the Spanish cooking oil epidemic, and AIDS.

UK £4.95; Abroad £6.00; US\$14.00 BMA members £4.45 or £5.50 ACP members US\$12.00

What's best for patients?

New drugs are continually being developed and knowledge about existing drugs is constantly expanding, so it is essential, but difficult, for doctors to keep up to date with the latest developments. *New Drugs* describes the most important therapeutic advances of the past decade and discusses the drugs that will be in common use in the 1990s. Completely revised and updated, this second edition has been expanded to include 11 additional chapters. Its coverage of practical aspects of drug use, avoidance of adverse reactions and interactions, and prescribing at extremes of age makes it an invaluable guide for busy practitioners who want to get the best out of the new drugs currently available.

Chapters include: Adverse reactions to drugs • Calcium antagonists • Diuretic treatment • Antiarrhythmic drugs • Insulin • Lipid lowering drugs • Antidepressant drugs • Centrally acting drugs • Controlling symptoms in advanced cancer

Second edition April 1991

UK £14.95; Abroad £18.00 (BMA members £13.95 or £17.00)

Doctors do not always agree on what is the right treatment even for quite common conditions. Often definitive clinical trials have not been performed and no one knows for sure the best way to treat. *Controversies in Therapeutics* looks at some problems that arise in general practice. For each one it offers two different approaches; and Peter Rubin, professor of therapeutics and consultant physician at the University Hospital of Nottingham, provides an editorial comment on these which summarises the prevailing views and helps you to make up your own mind. Written by academic experts with everyday clinical experience, *Controversies in Therapeutics* is a must for all physicians and general practitioners—both those who think they know it all and those who know they don't.

Chapters include: Role of diet in treating atopic eczema • Risks of dependence on benzodiazepine drugs • Thrombolysis and the general practitioner • Depression in childhood • Theophylline in the management of airflow obstruction • Management of constipation

January 1991
