Cover image: Fluorescent immunohistochemistry showing even distribution of β tubulin in a human hepatoma cell line (HuH-7); cells that were treated with retrorsine showed severe destruction of β tubulin with "naked nuclei". From: Zuckerman M, Steenkamp V, Stewart MJ. Hepatic veno-occlusive disease as a result of a traditional remedy: confirmation of toxic pyrrolizidine alkaloids as the cause, using an in vitro technique. *J Clin Pathol* 2002;55:676-9.
