Cover image: Subepithelial collagen bands around the tubules in the duodenal mucosa of a man with refractory enteropathy and circulating intestinal goblet cell autoantibodies. There is also goblet cell depletion and increased lymphoplasmacytic infiltrate (haematoxylin and eosin stain). From the case report by Hori K, Fukuda Y, Tomita T, et al. *J Clin Pathol* 2003;56:629–30.
