Trends in Clinical Pathology

Essays in Honour of Gordon Signy

This book is no pious collection of personal tributes but a survey of the old and the new disciplines in clinical pathology since the second world war—research in atherosclerosis and ischaemic heart disease, progress in medical virology, microbiology and cytology, the impact of antibiotics on medical bacteriology, chemical pathology and also molecular defence, haematology in mid-century, including haemostasis and blood transfusion. The place of fibrin in the story of hyalin is another modern study, so also is that on automation. The outlook on some members of the family Enterobacteriaceae is changing, and the ‘old’ forensic medicine is indeed new. And those pathologists working in the under-developed countries are not forgotten. The contributors are internationally renowned.
