

Hypoxia and Ischaemia

Symposium organized by
The Royal College of Pathologists
delivered in London in February 1977

Edited by
BASIL C. MORSON

Published for The Royal College of Pathologists by the
Journal of Clinical Pathology, BMA House, Tavistock Square
London WC1H 9JR England

£5.00

Tavistock Square, London WC1H 9JR*

Index

- ALSCHIBAJA, T., and MORSON, B. C.: Ischaemic bowel disease, **68**
- Adenosine triphosphate synthesis, **14**
- ALBERTI, K. G. M. M.: The biochemical consequences of hypoxia, **14**
- Angina, **46**
- Apnoea at birth, **135**
- , recurrent, in preterm infants, **138**
- Arterial embolism and ischaemic neuropathy, **98**
- Birth trauma and hypoxia, **144**
- Blood flow, coronary arterial, physiology of, **45**
- —, intestinal, reduction in splanchnic circulation in ischaemia, **62**
- —, local, control of, **7**
- —, reduction in shock syndrome, **3**
- Bone, dead, recognition of, **78**
- , ischaemia of, **78**
- necrosis, patterns of, **81**
- Brain cell membrane function, threshold sensitivity in relation to ischaemia, **152**
- damage, hypoxic. *See* Hypoxic brain damage
- function, assessment by averaged cortical evoked responses, **151**
- structure and function in relation to thresholds of ischaemia, **149**
- —, maintenance with lost function, **152**
- BRANSTON, N. M. *See* SYMON, L., BRANSTON, N. M., STRONG, A. J., and HOPE, T. D.
- BRIERLEY, J. B.: Experimental hypoxic brain damage, **181**
- Brisket disease, **24**
- BROWN, A. W.: Structural abnormalities in neurones, **155**
- Cardio-pulmonary adaptation at birth, failure of, **135**
- — — —, normal, **134**
- Carotid body and erythropoiesis, **42**
- — and hypoxia, **30**
- —, animal, in chronic hypoxia, **35**
- —, changes in chronic hypoxia, **39**
- —, human, in chronic hypoxia, **34**
- —, hypoxic enlargement of, reversibility of, **37**
- — in acute hypoxia, **31**
- — in sudden infant death syndrome, **42**
- —, normal, structure of, **30**
- —, ultrastructure in chronic hypoxia, **38**
- CATTO, M.: Ischaemia of bone, **78**
- Cerebral artery, middle, distribution in experimental primate, **149**
- hypoxia, **18, 149-187**
- —, types of, **170, 181**
- Chemodectoma and chronic hypoxia, **40**
- CLAIREAUX, A. E.: Pathology of perinatal hypoxia, **142**
- Convulsions, febrile, hypoxic brain damage in, **178**
- Coronary arterial blood flow, physiology of, **45**
- artery anatomy, **45**
- DAVIES, M. J.: The pathology of myocardial ischaemia, **45**
- Electron transport chain and ATP system, **16**
- Embolism, arterial, and ischaemic neuropathy, **98**
- Erythropoiesis and carotid body, **42**
- Fetal circulation, persistent, of unknown origin, **137**
- Glomerular changes in ischaemia, **114**
- Glycolysis and ATP synthesis, **14**
- GRAHAM, D. I.: Pathology of hypoxic brain damage in man, **170**
- Haemoglobin, oxygen dissociation from, **1**
- reduction, acute, **3**
- Haemorrhagic pulmonary oedema and massive pulmonary haemorrhage in newborn, **138**
- HARRIMAN, D. G. F.: Ischaemia of peripheral nerve and muscle, **94**
- Healing and tissue oxygenation, **12**
- HEATH, D.: Hypoxia and the pulmonary circulation, **21**
- HOPE, T. D. *See* SYMON, L., BRANSTON, N. M., STRONG, A. J., and HOPE, T. D.
- Hyaline membrane disease, **135**
- Hydrops fetalis, **139**
- Hypertension, pulmonary, hypoxic, reversibility of, **25**
- Hypovolaemia, **12**
- Hypoxaemia, **4**
- , effects in fetal sheep, **127**
- , fetal, cardiovascular changes in, **127, 131**
- , —, endocrine changes in, **129, 132**
- , —, long-term (chronic), **131**
- , —, metabolic responses in, **130, 132**
- , —, short-term, **127**
- Hypoxia and carotid body, **30**
- and liver, **18**
- and muscle, **17**
- and neonatal deaths, **144**
- and pulmonary circulation, **21**
- and tumours, **105**
- , biochemical consequences of, **14**
- , cerebral, **18, 149-187**
- , —, types of, **170, 181**
- , —, chronic, and chemodectoma, **40**
- in newborn infant, **134**
- , perinatal, **127-148**
- , —, pathology of, **142**
- , severe, consequences in newborn, **139**
- , tissue, clinical assessment of, **18**
- Hypoxic brain damage, anaemic, **177, 184**
- —, anoxic, **177, 183**
- —, experimental, **181**
- —, histotoxic, **177, 185**
- —, hypoglycaemic, **178, 185**
- —, hypoxic, **177, 184**
- — in febrile convulsions and status epilepticus, **178**
- —, ischaemic, **173, 182**
- —, oligaemic, **175, 183**
- —, pathology in man, **170**
- —, physiology in man, **170**
- Infant death. *See* Sudden infant death syndrome
- Infarction, myocardial. *See* Myocardial infarction
- Inflammation and tissue oxygenation, **12**
- Intestinal blood flow, reduction in splanchnic circulation in ischaemia, **62**
- ischaemia. *See* Ischaemic bowel disease
- Ischaemia and threshold sensitivity in brain cell membrane function, **152**
- and vascular disease, **98**

- , distribution and density in stroke model, 150
- , muscle, in man, 101
- , —, syndromes involving, 101
- , myocardial. *See* Myocardial ischaemia
- of bone, 78
- of peripheral nerve and muscle, 94
 - , —, chronic, 96
 - , renal. *See* Renal ischaemia
 - , responses of splanchnic circulation to, 59
 - , thresholds of, in relation to brain structure and function, 149
- Ischaemic bowel disease, 68
 - , —, aetiology and pathogenesis of, 74
 - , —, differential diagnosis of, 74
 - , —, location of, 69
 - , —, manifestations of, 65
 - , —, natural history of, 68
 - , —, nomenclature of, 68
 - , —, pathology of, acute phase, 70
 - , —, —, late sequelae, 73
 - , —, —, reparative phase, 71
 - cell change in cerebral hypoxia, 156
 - , —, —, reversibility of, 163
 - neuropathy and arterial embolism, 98
- Joint collapse and osteoarthritis, 87
 - JONES, C. T. *See* ROBINSON, J. S., JONES, C. T., and THORBURN, G. D.
- Juxtaarticular lesions, 82
