

Contents

Editor's foreword	page iv
<i>Scientific basis</i>	
Biological role of fibrinolysis JF DAVIDSON AND ISOBEL D WALKER	1
Biochemistry of the plasmin system D OGSTON	5
Breakdown products of fibrin and fibrinogen: molecular mechanisms and clinical implications PJ GAFFNEY	10
Plasminogen activators: a morphologist's view AS TODD	18
Natural inhibitors of fibrinolysis D COLLEN	24
Pathophysiology of intravascular coagulation and fibrinolysis AA SHARP	31
<i>Therapeutic considerations</i>	
Basis of antifibrinolytic therapy CRM PRENTICE	35
Clinical pharmacology of aminocaproic and tranexamic acids INGA MARIE NILSSON	41
Assessment of inhibitors with chromogenic substrates ZBIGNIEW S LATALLO	48
<i>Clinical applications</i>	
Inhibitors of fibrinolysis in the treatment of haemophilia CR RIZZA	50
Clinical applications of fibrinolytic inhibition in gynaecology J BONNAR, J GUILLEBAUD, JM KASONDE, AND BL SHEPPARD	55
Antifibrinolytic therapy in genitourinary tract surgery LENNART ANDERSSON	60
Fibrinolysis and gastrointestinal haemorrhage L POLLER	63
Tranexamic acid (AMCA) in aneurysmal subarachnoid haemorrhage H FODSTAD	68
Adjuvant treatment of ovarian carcinoma with tranexamic acid BIRGER ÅSTEDT	74
Future prospects for use of fibrinolysis inhibitors M VERSTRAETE	77
Index	81
