

# Contents

The genetic control of protein synthesis: The haemoglobin model	page 1
D. J. WEATHERALL .....	

## *Haemoglobinopathies*

The pathophysiology of beta-thalassaemia major	12
C. B. MODELL .....	
The clinical features of unstable haemoglobin disease	19
J. M. WHITE .....	
The sickling process in relation to clinical manifestations	23
A. J. BELLINGHAM .....	
Management of sickle-cell disease	26
JOHN STUART .....	
Genetic heterogeneity in inherited disease	32
HARRY HARRIS .....	

## *Inborn errors of metabolism*

Vitamin-responsive genetic disease	38
S. HARVEY MUDD ..	
Molecular variation in relation to purine metabolism	48
R. W. E. WATTS .....	
Mucopolysaccharidoses and mucolipidoses	64
F. VAN HOOF .....	
Sphingolipidoses	94
KONRAD SANDHOFF .....	
The glycogen storage diseases	106
BRENDA E. RYMAN .....	
Isoenzymes	122
D. A. HOPKINSON.....	

## *Erythrocyte enzyme deficiencies*

Pyruvate kinase deficiency	128
E. C. GORDON-SMITH .....	
Defective molecular variants of glucose-6-phosphate dehydrogenase and methaemoglobin reductase	134
JEAN-CLAUDE KAPLAN .....	
The physiological consequences of changes in oxygen affinity in red cell enzyme defects	142
E. R. HUEHNS .....	

## *Problems affecting the community*

Population screening	145
BARBARA E. CLAYTON .....	
Prenatal diagnosis and genetic counselling	150
D. J. H. BROCK .....	
The need for a national policy for the management of inherited metabolic disease	156
D. N. RAINE .....	

Index .....	165
